📍 Bengaluru, India

Professional Summary

Motivated Information Science graduate with strong proficiency in Python programming, web development, and database management. Hands-on experience building full-stack web applications and AI-based recommendation systems, with a focus on integrating relational databases, through academic and self-initiated projects. Quick learner with a problem-solving mindset, seeking an opportunity to contribute to scalable, high-quality software solutions. Familiar with Agile practices, version control (Git/GitHub), and writing clean, maintainable code.

Education

Jawaharlal Nehru National College of Engineering, Shivamogga

Dec 2022 – May 2026

Bachelor of Engineering – Information Science & Engineering

Relevant Coursework: Data Structures & Algorithms, DBMS, Operating Systems, Computer Networks, Software Engineering, OOP with Python

Technical Skills

Languages: Python

Web Technologies: HTML, CSS, JavaScript, React.js

Databases: MySQL

Frameworks & Libraries: Django, Pandas, NumPy, Matplotlib

Tools & Platforms: Git, GitHub, VS Code, PyCharm

Projects

Personalized Movie Ticket Booking System | *Python, Django, MySQL, HTML, CSS, JavaScript*

May 2026

- Built a full-stack movie ticket booking application using Django and MySQL with secure user authentication.
- Developed modules for movie browsing, seat selection, ticket booking, and booking history management.
- Integrated personalized movie recommendations based on user preferences and previous bookings.
- Designed a responsive user interface using HTML, CSS, and JavaScript to provide a seamless booking experience.

Smart Retail Management Using AI Algorithm | *Python, Machine Learning, Pandas, NumPy, SQL*

December 2025

- Developed an AI-powered retail recommendation system using Python and the SVD algorithm to generate personalized product recommendations.
- Processed and analyzed customer purchase data using Pandas and NumPy to identify buying patterns.
- Integrated SQL database operations for efficient storage and retrieval of customer and product information.
- Improved customer engagement by delivering data-driven recommendations based on historical purchase behavior.

Art Gallery Management System | *MySQL, SQL, DBMS*

April 2025

- Designed and developed a centralized database system to manage artworks, artists, exhibitions, customers, and sales records.
- Created normalized relational database schemas using SQL to improve data integrity and minimize redundancy.
- Implemented CRUD operations and optimized SQL queries for efficient data storage and retrieval.
- Enhanced gallery inventory and transaction management by automating record organization and reporting.

Internship

Pentagon Space | Python Full Stack Development Intern

Jan 2026 – Present

- Completed hands-on training in Python Full Stack Development, gaining practical experience in Django, React.js, MySQL, HTML, CSS, JavaScript, and Git.
- Developed responsive, database-driven web applications using Django for backend development and React.js for building interactive user interfaces.
- Applied software development best practices, including version control, debugging, and problem-solving, while working on real-world projects.
- Strengthened communication, teamwork, and collaboration skills through project-based learning, technical discussions, and presentations.

Certifications & Achievements

- Data Structures & Algorithms in Python – Infosys Springboard
- Computational Theory: Language Principle – Infosys Springboard
- Class Representative (CR) & Forum Representative (FR) for four years, leading student-faculty coordination and departmental initiatives.
